Fire Risk Assessment

Are YOUR premises safe from the risk of fire?

Has a competent person conducted a fire risk assessment?

Have all your employees received training in what to do in the event of a fire?

Why Should My Business Have a Fire Risk Assessment?

Ignorance of the Fire Regulations will be of no defence. Employers and responsible persons have an unconditional responsibility for the safety of employees and fire safety precautions within their premises.

The Regulatory Reform (Fire Safety) Order stipulates that a fire risk assessment is required and the relevant records are maintained on all premises with 5 or more employees.

Our professional consultants are able to provide assessments for a wide range of premises including: large industrial and commercial complexes, offices, factories, hospitals, care homes, schools and shops.

The Fire Risk Assessment package that will be provided will address the following categories:

- Site Details and Premises Use / Occupancy
- Building Structure
- Fire Safety administration
- Fire Fighting Facilities
- Identifying the Fire Hazards
- Fire Routine and Test procedure
- Means of Escape and Emergency Planning
- Review Procedures
- Fire Warning Facilities

On completion a Fire Risk Assessment document will be produced, and any recommendations made will be highlighted with digital photographic evidence included.

Any recommendations made will be formulated into an action plan for the client to implement. All documentation will be provided in a format which is editable by the client for future periodic reviews.

A fire risk assessment could be the difference between your business success and failure.

Why not drop us an email or call to discuss your requirements.
